

Piezoelectric accelerometer

Model 2221F

Key features

- NEW! 2221F-R available as replacement sensor
- High temperature operation (+260°C)
- Hermetically sealed
- 360° cable orientation
- Lightweight
- Aerospace and flight testing

The Endevco® model 2221F piezoelectric accelerometer is designed specifically for high temperature vibration measurement on small structures and objects. The unit is hermetically sealed and is ideal for use in extreme environmental conditions. Its light weight (11 gm) effectively minimizes mass loading. The accelerometer is a self-generating device that requires no external power source for operation.

The model 2221F features Endevco's Piezite® type P-8 crystal element operating in annular shear mode. This unit exhibits excellent output sensitivity stability over time. Signal ground is connected to the outer case of the unit and, when used with an isolated mounting screw, the accelerometer is electrically isolated from ground. A low-noise coaxial cable is supplied for error-free operation. The transducer has a centrally located thru bolt, allowing for 360° cable orientation. The unit may also be adhesively mounted if the application permits.

Endevco signal conditioner models 133, 2771C, 2775B or OASIS 2000 computer-controlled system are recommended for use with this high impedance accelerometer.

Piezoelectric accelerometer

Model 2221F

Specifications

The following performance specifications conform to ISA-RP-37.2 (1964) and are typical values, referenced at +75°F (+24°C), 4 mA and 100 Hz, unless otherwise noted. Calibration data, traceable to National Institute of Standards and Technology (NIST), is supplied

Dynamic characteristics

Charge sensitivity	Units	
Typical	pC/g	10.0
Minimum	pC/g	7.5
Frequency response		See typical amplitude response
Resonance frequency	kHz	45
Amplitude response [1]		
±5%	Hz	1 to 10 000
±1 dB	Hz	.1 to 12 000
Temperature response		See typical curve
Transverse sensitivity	%	≤ 3
Amplitude linearity	%	1
Per 400g, 0 to 2000 g		

Electrical characteristics

Output polarity		Acceleration directed into the base of the unit produces positive output
Resistance	GΩ	≥ 10
Resistance at +350°F (+177°C)	GΩ	≥ 1
Isolation	MΩ	10
Capacitance	pF	900
Grounding		Signal return is connected to case. Case is isolated from mounting surface by insulated screw assembly.

Environmental characteristics

Temperature range		-67°F to +500°F (-55°C to +260°C)
Humidity		Hermetically sealed
Sinusoidal vibration limit	g pk	1000
Shock limit	g pk	3000
Base strain sensitivity	equiv. g pk/μ strain	0.02
Thermal transient sensitivity	equiv. g pk/°F [°C]	0.004 (0.007)

Physical characteristics

Dimensions		See outline drawing
Weight	gm (oz)	11 (0.39)
Case material		Stainless steel
Connector		Coaxial, 10-32 male thread
Mounting torque	lbf-in (Nm)	8 (1)

Calibration

Supplied:		
Frequency response	%	20 Hz to 10 000 Hz
	dB	10 kHz to 50 kHz
Charge sensitivity	pC/g	
Maximum transverse sensitivity	%	
Capacitance	pF	

Piezoelectric accelerometer

Model 2221F

Accessories

Product	Description	2221F	2221F-R
3090C-120	Cable assembly, 10 ft	Included	Optional
10207	Insulated mounting screw	Included	Included
EHM49	Allen wrench, 7/64 inch	Included	Optional
2987	Adhesive mounting adapter	Included	Optional
2771C	In-line charge converter	Optional	Optional
133	Signal conditioner	Optional	Optional
2775B	Signal conditioner	Optional	Optional
4990A-1	OASIS 2000 computer-controlled system	Optional	Optional

Notes:

1. Low-end response of the transducer is a function of its associated electronics.
2. Short duration shock pulses, such as those generated by metal-to-metal impacts, may excite transducer resonance and cause linearity errors. Send for TP290 for more details.
3. Maintain high levels of precision and accuracy using Endevco's factory calibration services. Call Endevco's inside sales force at 866-ENDEVCO for recommended intervals, pricing and turn-around time for these services as well as for quotations on our standard products.
