# High g shock Isotron® accelerometer

### Model 2255B

STANDARD TOLERANCE INCHES (MILLIMETERS) .XX = +/- .02 (.X = +/- .5) .XXX = +/- .010 (.XX = +/- .25)

#### **Key features**

- Low impedance output
- Far-field, high-g shock
- Built-in electronic LP filter
- Strain isolated
- Solder terminals

#### **Description**

The Endevco® model 2255B is a miniature, lightweight piezoelectric accelerometer with integral electronics, designed specifically for far-field high-g shock measurement on structures and test articles. The unit features an electronic second order low-pass filter between the sensor and the amplifier input stage to prevent saturation due to accelerometer resonance.

The model 2255B features Endevco's Piezite® crystal element, operating in annular shear mode, which exhibits excellent output stability over time. A unique strain isolation design internal to the sensor assembly reduces any strain input due to bending motion in the mounting surface. This accelerometer incorporates an internal hybrid signal conditioner in a two-wire system, which transmits its low impedance voltage output through the same cable that supplies the required constant current power. Both the output and signal ground terminals are electrically isolated from the mounting surface. The accelerometer features an integral 1/4-28 mounting stud and two solder-pin terminals for output connection. Small gauge, light weight hook-up wires are provided for error-free operation. The Model number suffix indicates acceleration sensitivity in mV/g; i.e., 2255B-01 features output sensitivity of 0.1 mV/g.

Endevco signal conditioner models 4416C, 133, 2792B, or 2793, set to  $\pm$ 10 mA, are recommended for use with this accelerometer.

## Model 2255B

### **Specifications**

The following performance specifications conform to ISA-RP-37.2 (1964) and are typical values, referenced at +75°F (+24°C), 4 mA, and 100 Hz, unless otherwise noted. Calibration data, traceable to National Institute of Standards and Technology (NIST), is supplied.

### Model 2255B

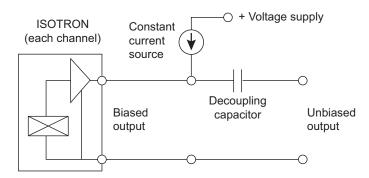

#### Accessories

| Product  | Description                       | 2255B-1, -01 |
|----------|-----------------------------------|--------------|
| 3024-120 | 10ft cable assembly, twisted pair | Included     |
| 2967C    | Titianium triaxial mounting block | Optional     |

- 1. Resonances due to different modes of vibration occur between 120kHz and 310 kHz. They are completely suppressed by the built-in low pass filter and will not affect linear response of the accelerometer.
- 2. Putting small shrink tubing over the solder joints is recommended.
- 3. All models subjected to 50,000 g proof shock prior to calibration.
- 4. Unit is calibrated by the comparison shock method described in Section 5 of S2.2-1959, American Standards Institute, on ENDEVCO Model 2925 Comparison Shock Calibrator.

#### Ordering information

1. Maintain high levels of precision and accuracy using Endevco's factory calibration services. Call Endevco's inside sales force at 866-ENDEVCO for recommended intervals, pricing and turn-around time for these services as well as for quotations on our standard products.

Continued product improvement necessitates that Endevco reserve the right to modify these specifications without notice. Endevco maintains a program of constant surveillance over all products to ensure a high level of reliability. This program includes attention to reliability factors during product design, the support of stringent Quality Control requirements, and compulsory corrective action procedures. These measures, together with conservative specifications have made the name Endevco synonymous with reliability.
